THE NEW CONCRETE LEVERAGE ANCHOR

Monkey Fist is a new patented device, designed and engineered for quickly removing pre-sawn concrete and for slabs on grade, without using a Jack hammer. Ideal for removing sections of concrete without spalling or chipping the edges of the remaining adjacent concrete slab.

Monkey Fist has many other applications, and it is reusable as well! Simply core drill a 52mm (or 2") diameter hole.

Monkey Fist has a Safe Working Load (SWL) of 2,490 kg. Depending on the application, one, two or more anchors can be used. Insert the Monkey Fist into the pre-drilled holes, and lift the slab (or concrete element) out. To recover the Monkey Fist, just lift the release handle, remove and reuse.

3 EASY STEPS

1. Saw concrete into manageable sized slabs (up to 2,490kg per device).
2. Core drill a 52mm hole centred on the slab to be removed.
3. Lift up pre-cut concrete, release with handle
